With over 70 years of experience, a highly trained staff of plastics professionals, and a full line of plastic materials, Curbell Plastics is committed to providing our customers with the best technical expertise and service. From bearing and wear to electrical or high temperature applications, we focus on working with our customers to understand their specific applications and material needs.

CURBELL PLASTICS’ CAPABILITIES:
• Technical expertise
• Local inventory
• Wide product offering
• On-time delivery
• Cut-to-size materials
• Fabrication services
• Film conversion

Put us to work – for you!
Curbell Plastics has been supplying plastic sheet, rod, tube, films, adhesives, sealants, tapes, prototyping and tooling materials, and fabricated parts for over 70 years.

**ABS (acrylonitrile-butadiene-styrene)**

ABS is a low cost thermoplastic material with outstanding impact resistance, machinability, and thermoforming characteristics. It is an excellent choice for machine housings, retail store fixtures, and point-of-purchase displays where impact resistance is required.

Royalite® R59 is a fire-rated ABS/PVC alloy sheet material, that is often used for transportation, architectural, and electronics applications that require UL certifications.

Royalite® R84/21 is an ABS sheet material with a proprietary weatherable cap layer for improved performance in outdoor environments. The material is an excellent choice for marine, automotive, and recreational vehicle components where good weatherability is required.
KEY CHARACTERISTICS:
• Outstanding impact resistance
• Good machinability
• Easy to thermoform
• Easy to bond with adhesives
• Strong and stiff
• Low cost
• Flame retardant grades available
• Available in a wide variety of colors and textures

APPLICATIONS:
• Machine housings, guards, and covers
• Instrument panels
• Point-of-purchase displays
• Models and prototypes
• Thermoformed trays and tote bins

IMPACT RESISTANCE

of ABS compared with High Impact Polystyrene
ACETAL (polyoxymethylene)

**TYPICAL USES:**

**BEARING BLOCK**
- High strength
- Easy to machine

**BELT GUIDE BUSHING**
- Low water absorption
- Good wear properties
- Low friction

Acetal is a high strength, low friction engineering plastic that has excellent wear properties in both wet and dry environments. Good dimensional stability and ease of machining make acetal an outstanding choice for applications requiring complex machining to tight tolerances.

Homopolymer acetal (Delrin®) has superior room temperature strength, stiffness, and toughness. Copolymer acetal has superior performance in continuous high heat and hot water environments. Copolymer acetal also tends to have less porosity than homopolymer acetal.

Acetal is available in glass-filled grades that offer enhanced strength and stiffness. It is also available in a number of enhanced bearing and wear grades including: Delrin® AF, Delrin® AF blend, and TECAFORM™ HPV 13.

ACRYLIC  (polymethyl methacrylate)

ACRYLITE® / OPTIX® / PLEXIGLAS®

TYPICAL USES:

POINT-OF-PURCHASE DISPLAY
• Easy to fabricate
• Cost effective

Acrylic is a transparent thermoplastic with outstanding strength, stiffness, and optical clarity. Acrylic sheet is easy to fabricate, bonds well with adhesives and solvents, and is easy to thermoform.

Acrylic is widely used for architectural glazing, indoor and outdoor signs, retail store fixtures, and point-of-purchase displays.
**KEY CHARACTERISTICS:**
- Optically clear
- Strong and stiff
- Easy to fabricate
- Easy to solvent bond
- UV resistant grades available
- Impact resistant grades available
- Wide array of coatings available, including: abrasion resistant, bullet resistant, and ESD (electrostatic dissipative)
- FDA compliant grades available (non UV stabilized)
- Cell cast grades available
- Variety of profiles and shapes available
- Many colors and textures available

**APPLICATIONS:**
- Signs
- Retail fixtures
- Point-of-purchase displays
- Architectural glazing
- Skylights
- Aircraft canopies
- Boat windshields
- Transparent manifolds

KYDEX® THERMOPLASTIC SHEET

TYPICAL USES:

AIRPLANE TRAY TABLES
- Easy to thermoform
- Aircraft grades meet FAA fire retardancy requirements

Kydex® thermoplastic sheet is a proprietary thermoplastic sheet material that has excellent aesthetic qualities, superior impact resistance, and outstanding formability. It is an excellent choice for thermoformed equipment housings and airplane, bus, and train interior parts where appearance, toughness, and complex thermoforming are required.
**KEY CHARACTERISTICS:**
- Excellent impact resistance
- Easy to thermoform
- Strong and stiff
- Good electrical insulating properties
- Consistent color throughout material helps hide scratches and wear
- UL rated grades available
- Fire retardant grades available
- FAA compliant grades available
- Available in a wide variety of colors and textures

**APPLICATIONS:**
- Thermoformed equipment housings
- Kiosks
- Point-of-purchase displays
- Store fixtures
- Aircraft, bus, and train interior parts
- Membrane pressed furniture components

**IMPACT RESISTANCE**

of Kydex® compared with High Impact Polystyrene and ABS
Noryl® modified PPO is an engineering thermoplastic with outstanding strength, stiffness, and electrical insulating properties. Noryl® has high dielectric strength, a low coefficient of thermal expansion, and low moisture absorption which make it an excellent choice for electrical applications that require machining to tight tolerances.

Noryl® is available in glass-filled grades which have enhanced strength and stiffness.
**KEY CHARACTERISTICS:**
- High dielectric strength
- Strong and stiff
- Good impact resistance
- Good dimensional stability
- Easy to machine
- Glass-filled grades available
- Grades available that meet UL 94-V0

**APPLICATIONS:**
- Electrical components
- Semiconductor equipment parts
- Scientific instrumentation components

**ENGINEERING NOTES:**

Noryl® can often be used as a lower cost alternative to Ultem® for electrical applications where the high temperature capability and high dielectric strength of Ultem® are not required.

---

**Standard Sizes:**
- SHEET: 24”x48” (0.25”-4.0” thick)
- ROD: diameter 0.1875”-8.0”

Length, width, thickness, and diameter tolerances vary by size and by manufacturer • Custom sizes and colors available upon request • Many of our materials are available as films with thicknesses of 0.029” or less. For additional property data please refer to the chart on the inside back cover. Values may vary according to brand name. Please ask your Curbell Plastics representative for more specific information about an individual brand.
Nylon is a strong, stiff engineering plastic with outstanding bearing and wear properties. Nylon is frequently used to replace metal bearings and bushings, often eliminating the need for external lubrication. Other benefits include a reduction in part weight, less operating noise, and decreased wear on mating parts.

Nylon is available in a variety of specialty formulations. Molybdenum disulphide-filled and oil-filled nylons have enhanced wear properties, while heat stabilized nylon will withstand higher operating temperatures. For enhanced strength and stiffness, nylon is also available in glass-filled grades.

In power transmission applications NYMETAL™ billets made with nylon and a metal core combine the performance advantages of nylon and metal into one cohesive unit. The billets can be manufactured into many different components including gears, rollers, sprockets, and augers.
KEY CHARACTERISTICS:
• Excellent bearing and wear properties
• Strong and stiff
• Good chemical resistance
• Easy to machine
• Reduced noise, weight, and wear on mating parts compared with many traditional metal bearing materials
• Nylon billets with metal cores available

APPLICATIONS:
• Bearings and bushings
• Gears
• Wear pads
• Packaging machinery components
• Food processing machinery components
• Wheels
• Rollers
• Seals and gaskets

Nylon has relatively high moisture absorption compared with many other thermoplastics. Nylon parts that must perform in wet environments should be designed with tolerances that factor in dimensional changes due to moisture absorption.
TYPICAL USES:

TEST SOCKET
- Dimensionally stable
- Performs well at elevated temperatures

PAI (polyamide-imide) is an extremely strong and stiff plastic material. It is often used in elevated temperature environments where other thermoplastics would lose their mechanical properties.

PAI is a very dimensionally stable material with an extremely low coefficient of thermal expansion making it an excellent choice for applications that require machining to tight tolerances.

PAI is available in a variety of formulations including electrical, bearing and wear, and glass-filled grades. Electrical grade PAI has extremely high dielectric strength and it is often used for applications where it functions as an electrical insulator. Bearing grade PAI can be used for demanding bearing applications that require extreme loads, speeds, and/or elevated temperatures. Glass-filled PAI has enhanced strength and stiffness.
KEY CHARACTERISTICS:

- Strong and stiff
- Performs well at elevated temperatures
- Extremely low thermal expansion
- Excellent electrical insulating properties (electrical grade)
- Outstanding bearing and wear properties (bearing grade)
- Good resistance to many common solvents, fuels, and acids

APPLICATIONS:

- Semiconductor machinery parts
- Chip test sockets
- Aerospace components
- Electrical connectors
- Bearings and bushings
- Bearing cages
- Pump and valve parts
- Seals

**PBT** (polybutylene terephthalate)

**TYPICAL USES:**
- **CONTACT MOUNTING**
  - High dielectric strength
  - Low moisture absorption

PBT is a strong, stiff engineering plastic with excellent machining characteristics, chemical resistance, and bearing and wear properties. PBT is often used for food processing machinery applications when low moisture absorption, resistance to staining, or resistance to cleaning chemicals is required.

SUSTADUR® PBT / TECADUR™ PBT
KEY CHARACTERISTICS:
- Excellent chemical resistance including resistance to many CIP wash-down solutions
- Low moisture absorption
- Excellent wear resistance, even in wet environments
- Excellent machining characteristics
- Stain resistance
- Internally lubricated bearing grades available
- FDA compliant grades available

APPLICATIONS:
- Valves
- Filler pistons
- Bearings and bushings
- Gears
- Wear pads
- Packaging machinery parts
- Food processing machinery components
- Wheels
- Rollers
- Electrical components

Standard Sizes: **SHEET:** 24"x48" (0.25"-2.5" thick) **ROD:** diameter 0.25"-6.0"

Length, width, thickness, and diameter tolerances vary by size and by manufacturer • Custom sizes and colors available upon request • Many of our materials are available as films with thicknesses of 0.029" or less.

For additional property data please refer to the chart on the inside back cover. Values may vary according to brand name. Please ask your Curbell Plastics representative for more specific information about an individual brand.

PBT is also available as a film. See pages 58-59 for more detailed information.
**PEEK** (polyetheretherketone)

**SUSTA® PEEK / TECAPEEK™**

**TYPICAL USES:**

**IDLER GEAR FOR GEAR PUMP**
- Strong
- Chemical resistant
- Able to withstand elevated temperatures

PEEK is a strong and stiff plastic material that is often used in applications where performance at elevated temperatures is required. PEEK has outstanding chemical resistance as well as resistance to steam and hot water.

Virgin PEEK is naturally abrasion resistant. Bearing-grade PEEK has enhanced bearing and wear properties.
KEY CHARACTERISTICS:
- Strong and stiff
- Outstanding chemical resistance
- Good mechanical properties at elevated temperatures
- Excellent chemical resistance
- Resistant to hot water and steam
- Bearing grade has excellent wear characteristics

APPLICATIONS:
- Semiconductor machinery components
- Aerospace parts
- Seals
- Pump and valve components
- Bearings and bushings (bearing grade)
- Electrical components
- Medical instrument parts
- Food processing machinery components

Standard Sizes: SHEET: 24"x48" (0.03"-2.0" thick) ROD: diameter 0.25"-6.0" TUBE: call for availability

Length, width, thickness, and diameter tolerances vary by size and by manufacturer • Custom sizes and colors available upon request • Many of our materials are available as films with thicknesses of 0.029" or less.

For additional property data please refer to the chart on the inside back cover. Values may vary according to brand name. Please ask your Curbell Plastics representative for more specific information about an individual brand.

Although PEEK generally has excellent chemical resistance, some strong acids including concentrated hydrofluoric acid can attack the material.

ENGINEERING NOTES:
PEEK is also available as a film. See pages 58-59 for more detailed information.
PET (polyethylene terephthalate, semicrystalline)

SUSTADUR® PET / TECADUR™ PET

PET (semicrystalline) is a strong, stiff engineering plastic with excellent machining characteristics, chemical resistance, and bearing and wear properties. PET is often used for food processing machinery applications where low moisture absorption, low thermal expansion, resistance to staining, or resistance to cleaning chemicals is required.

TYPICAL USES:

ROLLER
- Low friction
- Good machinability

FILLING PISTON
- Low friction
- Good chemical resistance
- Low thermal expansion
- Low moisture absorption
KEY CHARACTERISTICS:
• Strong and stiff
• Excellent chemical resistance, including resistance to many CIP wash-down solutions
• Low moisture absorption
• Low thermal expansion
• Excellent wear characteristics, even in wet environments
• Stain resistance
• Internally lubricated grades available
• FDA compliant grades available

APPLICATIONS:
• Valve components
• Manifolds
• Filler pistons
• Bearings and bushings
• Wear pads
• Packaging machinery parts
• Food processing machinery components
• Wheels
• Rollers
• Electrical components

PETG (amorphous copolyester)

TYPICAL USES:

THERMOFORMED DISPLAY
- Excellent deep draw thermoforming characteristics

PETG is a transparent thermoplastic sheet material with outstanding thermoformability and good impact resistance. PETG is an excellent choice for applications that require durability, deep draw thermoforming, and clarity.
**KEY CHARACTERISTICS:**
- Outstanding thermoforming characteristics, particularly in deep draw applications
- Does not usually require drying prior to thermoforming
- Good impact resistance
- Clear
- Lower cost alternative to polycarbonate
- Less brittle than acrylic
- Superior chemical resistance when compared with many other transparent plastics
- Easy to fabricate
- Allows for rapid thermoforming cycle times
- Brake formable (up to 0.080" thickness)
- FDA compliant grades available

**APPLICATIONS:**
- Point-of-purchase displays
- Retail store fixtures
- Prototypes and models
- Orthotic and prosthetic devices
- Machine guards and housings

**IMPACT RESISTANCE**

Comparison of PETG compared with Acrylic.

[Bar chart showing impact resistance with PETG at 1.7 ft-lbs/in of notch and Acrylic at 0.4 ft-lbs/in of notch]

PETG is also available as a film. See pages 58-59 for more detailed information.
Polycarbonate is a transparent, strong, and stiff thermoplastic material with outstanding impact resistance.

Polycarbonate's toughness and optical clarity make it ideal for a wide variety of applications including machine guards, indoor and outdoor signs, architectural glazing, face shields, skylights, and point-of-purchase displays.

Polycarbonate rod and plate are easy to machine and have excellent dimensional stability. Polycarbonate machining stock is used for numerous applications including electrical components, manifolds, sight glasses, and semiconductor machinery parts.

Polycarbonate thermoforms well, is easy to paint, and bonds well using solvents or adhesives.

Makrolon® AR is polycarbonate sheet with a transparent hard coat finish, which provides the material with enhanced weatherability, chemical resistance, and abrasion resistance. It is often used for glazing applications in high traffic areas such as bus shelters.

Makrolon Hygard® laminates are bullet-resistant sheet materials consisting of layers of polycarbonate or polycarbonate and acrylic with bonding interlayers. Makrolon Hygard® is used for security glazing applications including police stations and detention centers. The material is available in a variety of configurations depending on the level of protection required.
**KEY CHARACTERISTICS:**
- Outstanding toughness
- Good optical clarity
- Strong and stiff
- Easy to fabricate
- Thermoforms well after drying
- Replaces acrylic and PETG in high impact applications
- Available with a UL 94 V-0 flammability rating (0.220" thickness, clear)

**APPLICATIONS:**
- Machine guards
- Signs
- Point-of-purchase displays
- Architectural glazing
- Skylights
- Transparent manifolds
- Site glasses
- Semiconductor machinery components

* Double-15º notch

Polyethylene is also available as a film and tape. See pages 58-59 and 60 respectively for more detailed information.
**KEY CHARACTERISTICS:**
- Soft and pliable
- Easy to weld and easy to heat seal
- Good chemical resistance
- Low cost
- Printable grades available
- FDA compliant grades available
- Available in a wide variety of colors

**APPLICATIONS:**
- Orthotics
- Prosthetics

---

**LDPE (low density polyethylene)**

LDPE (low density polyethylene) is a soft, stretchy plastic material. LDPE sheet is used for orthotics and prosthetics when softness and flexibility are required.

**Standard Sizes:** **SHEET:** 48"x96" (0.062"-2.0" thick)
Length, width, thickness, and diameter tolerances vary by size and by manufacturer • Custom sizes and colors available upon request • Many of our materials are available as films with thicknesses of 0.029" or less.

---

**TYPICAL USES:**
- **ORTHOTICS**
  - Soft
  - Flexible
HDPE (high density polyethylene) is available as sheet or rod stock for applications that require greater strength and stiffness than LDPE. HDPE with an embossed surface is widely used as a cutting board material in restaurants and food processing plants. HDPE is easy to weld using thermoplastic welding equipment and is an excellent choice for fabricated water tanks and chemical tanks that must be assembled by thermoplastic welding.

**TYPICAL USES:**

**CUTTING BOARDS**
- FDA compliant
- Low water absorption
- Chemical resistance

**APPLICATIONS:**
- Chemical tanks
- Water pipe flanges (pipe grade)
- Cutting boards for food preparation
- Orthotics and prosthetics
- Playground equipment

**KEY CHARACTERISTICS:**
- Easy to weld using thermoplastic welding equipment
- Low moisture absorption
- Excellent surface for food preparation
- Good chemical resistance
- Low cost
- Printable grades available
- FDA compliant grades available
- Available in a wide variety of colors

Standard Sizes: SHEET: 48”x96” (0.062”-4.0” thick), 48”x120” (0.062”-4.0” thick), 60”x120” (0.125”-1.0” thick), 96”x120” (1.5”-4.0” thick), 96”x240” (1.5”-4.0” thick) ROD: diameter 0.25”-10.0”

Length, width, thickness, and diameter tolerances vary by size and by manufacturer • Custom sizes and colors available upon request • Many of our materials are available as films with thicknesses of 0.029” or less.
**UHMW-PE** (ultra high molecular weight polyethylene)

**KEY CHARACTERISTICS:**
- Extremely tough and durable
- Low friction
- Excellent abrasion resistance
- Good chemical resistance
- Low water absorption

**APPLICATIONS:**
- Chute liners and hopper liners
- Wear strips
- Star wheels
- Idler sprockets
- Packaging machinery components
- Food processing machinery components

**IMPACT RESISTANCE**

**UHMW-PE** (ultra high molecular weight polyethylene) is an extremely tough and abrasion resistant thermoplastic that is used for applications that require durability and/or abrasive wear resistance.

UHMW sheet is often used for lining chutes and hoppers in order to protect metal surfaces and promote the flow of solid materials such as sand, wood chips, or coal. UHMW is also used for packaging, conveyor, and food processing machinery parts including star wheels, idler sprockets, and under-chain wear strips.

**POLYSTONE® M**

**KEY CHARACTERISTICS:**
- Extremely tough and durable
- Low friction
- Excellent abrasion resistance
- Good chemical resistance
- Low water absorption
- Easy to fabricate
- Reprocessed grades available
- Enhanced bearing and wear grades available
- FDA compliant grades available

**ENGINEERING NOTES:**

**Standard Sizes:**
- SHEET: 48”x96” (0.062”-4.0” thick), 48”x120” (0.062”-7.0” thick), 48”x144” (0.375”-4.0” thick), 60”x96” (0.375”-4.0” thick), 60”x120” (0.375”-4.0” thick)
- POLYSTONE® MEGASHEET: 96”x240” (0.375”-4.0” thick)
- ROD: diameter 0.25” - 10.00” TUBE: diameter 2.0” - 9.398”

Length, width, thickness, and diameter tolerances vary by size and by manufacturer. Custom sizes and colors available upon request. Many of our materials are available as films with thicknesses of 0.029” or less.

**Ultra high molecular weight polyethylene has a relatively high coefficient of thermal expansion. This may make it difficult to hold tight tolerances on UHMW parts that will be exposed to changing temperatures.**
Polypolylene is a low cost, chemically resistant plastic material with excellent aesthetic qualities. Polypolylene is easy to weld using thermoplastic welding equipment and is often fabricated into water and chemical tanks.

Polypolylene is available in both homopolymer and copolymer grades. Homopolymer polypolylene is stronger and stiffer than copolymer. Copolymer polypolylene is a bit softer, but it is tougher and more durable than homopolymer polypolylene. Copolymer polypolylene tends to have better stress crack resistance and low temperature toughness than homopolymer.

Heat stabilized polypolylene is available in a medical grade which is easily machined and specifically designed for surgical trays and caddies. It has excellent dimensional stability and resistance to steam autoclaving with relatively low moisture absorption.
KEY CHARACTERISTICS:
• Easy to weld using thermoplastic welding equipment
• Low moisture absorption
• Good chemical resistance
• Low cost
• Extremely tough (copolymer)

APPLICATIONS:
• Chemical tanks
• Plating tanks
• Fire truck water tanks (copolymer)
• Cutting boards for food preparation
• Semiconductor equipment cabinets and work surfaces
• Orthotics and prosthetics

Polypropylene is also available as a film. See pages 58-59 for more detailed information.
**POLYSTYRENE** (HIPS, high impact polystyrene)

**TYPICAL USES:**

**POINT-OF-PURCHASE DISPLAY**
- Cost effective
- Easy to thermoform

High impact polystyrene is a low cost, tough plastic material that is easy to thermoform and fabricate. It is often used for countertop point-of-purchase displays, banners, and indoor signs. The material can be assembled with mechanical fasteners, solvents, or adhesives.

Printable grades of high impact polystyrene can be decorated using a variety of printing methods including screen printing, offset lithography, and flexography.

HIPS sheet is available in a wide variety of colors and textures.
**KEY CHARACTERISTICS:**
- Low cost
- Easy to paint or print on
- Easy to assemble with adhesives or solvents
- Outstanding thermoforming characteristics
- Good machinability
- High impact strength
- FDA compliant grades available
- Available in a wide variety of colors and textures

**APPLICATIONS:**
- Point-of-purchase displays
- Printed advertising graphics
- Models and prototypes
- Thermoformed machine housings

Polysulfone is a high temperature, amber colored, semi-transparent plastic material with good mechanical properties. Polysulfone is resistant to degradation from hot water and steam and it is often used in medical and food preparation applications where repeated sterilization is required.

Polysulfone can be used as an alternative to polycarbonate or acrylic for applications requiring high temperature performance or exposure to hot water and steam.
KEY CHARACTERISTICS:
• Semi-transparent
• Resists hydrolysis when exposed to hot water or steam
• Strong and stiff
• Can be used at higher temperatures than acrylic or polycarbonate
• Thermoformable
• FDA compliant grades available
• Medical grades available

APPLICATIONS:
• Medical instrument components
• Manifolds
• Medical trays
• Autoclavable instruments and trays

Polyurethanes are engineered elastomers that can be cast into sheets or rods as well as finished parts. Polyurethanes are graded depending on their hardness or durometer. They are available in a wide variety of durometers ranging from Shore 50A (extremely soft and rubbery) to Shore 75D (hard and stiff).

Polyurethanes are extremely tough, resilient, and abrasion resistant. They are used for a wide variety of applications including bumpers, wheel covers, roller covers, snow plow edges, and screen printing squeegees.
KEY CHARACTERISTICS:
• Absorbs impact and vibration
• Resilient and tough
• Abrasion resistant
• Can be cast into a variety of shapes and finished parts
• Can be cast directly onto metal wheels and rollers

APPLICATIONS:
• Bumpers
• Wheels
• Rollers
• Snow plow edges
• Packaging machinery components
• Assembly fixtures, checking fixtures, and storage fixtures

Standard Sizes:
SHEET: 48”x48” (0.0313”-5.0” thick) ROD: diameter 0.25” and up
Length, width, thickness, and diameter tolerances vary by size and by manufacturer • Custom sizes and colors available upon request • Many of our materials are available as films with thicknesses of 0.029” or less. For additional property data please refer to the chart on the inside back cover. Values may vary according to brand name. Please ask your Curbell Plastics representative for more specific information about an individual brand.
PPS (polyphenylene sulfide)

PPS is a chemical and corrosion resistant plastic material that is often used in applications involving exposure to corrosive chemicals at elevated temperatures. PPS has outstanding mechanical properties and is also available in a bearing-grade that has excellent wear resistance.

PPS is often used as a lower cost alternative to PEEK at low to moderate temperatures.
KEY CHARACTERISTICS:
- Outstanding chemical resistance
- Resistant to hot water and steam
- Strong and stiff
- Can be used at elevated temperatures
- Bearing grade has excellent wear characteristics
- Good dimensional stability
- Low moisture absorption
- Low thermal expansion
- High dielectric strength

APPLICATIONS:
- Semiconductor machinery components
- Scientific instrumentation parts
- Seals
- Pump and valve components
- Bearings and bushings (bearing grade)
- Electrical components

PTFE (polytetrafluoroethylene)

**TYPICAL USES:**

**FITTING**
- Good sealing characteristics

**FILTER COMPONENT**
- Good chemical resistance

PTFE is a soft, low friction fluoropolymer with outstanding chemical resistance and weathering resistance. PTFE is stable at temperatures up to 500°F and it is often used in high temperature environments. PTFE also has excellent electrical insulating properties.

PTFE is available in a variety of formulations including unfilled, glass-filled, and bearing grades. Unfilled PTFE is extremely soft and formable and it is often used for chemical resistant seals and gaskets. Glass-filled PTFE has enhanced strength and stiffness. Bearing grades of PTFE have extremely low friction and high service temperatures. They are frequently specified for high performance bearings and bushings, particularly in applications that require resistance to corrosive chemicals.

PTFE sheet, rod, and tube are available in virgin grade, which is made from virgin PTFE resin as well as reprocessed or mechanical grade, which is made from recycled material.

KEY CHARACTERISTICS:
• Outstanding chemical resistance
• Extremely low friction
• Soft and formable
• Good bearing and wear properties (bearing grades)
• Good weathering resistance
• Performs well at elevated temperatures
• FDA compliant grades available

APPLICATIONS:
• Seals and gaskets
• Valve and fitting components
• Pump parts
• Manifolds
• Semiconductor equipment
• Scientific equipment
• Medical equipment
• Chemical resistant tubing
• Bearings and bushings (bearing grades)

PTFE is also available as a film and tape. See pages 58-59 and 60 respectively for more detailed information.
PVC (polyvinyl chloride, rigid)

TYPICAL USES:

VALVE COMPONENT
- Excellent machining characteristics
- Easy to bond with adhesives

Rigid PVC is a strong, stiff, low cost plastic material that is easy to fabricate and easy to bond using adhesives or solvents. It is also easy to weld using thermoplastic welding equipment. PVC is frequently used in the construction of tanks, valves, and piping systems.
KEY CHARACTERISTICS:
• Strong and stiff
• Low cost
• Easy to weld using thermoplastic welding equipment
• Easy to join using solvents or adhesives
• FDA compliant grades available

APPLICATIONS:
• Welded tanks
• Manifolds
• Valve and pump housings
• Fittings
• Piping systems
• Cabinets and working surfaces

PVDF (polyvinylidene fluoride)

TYPICAL USES:

MANIFOLD
- High purity
- Chemical resistant

PVDF, often referred to by its trade name Kynar®, is a high purity engineering thermoplastic with excellent chemical resistance, abrasion resistance, flame resistance, and UV stability. PVDF is widely used for chemical tank liners and semiconductor equipment components.

Homopolymer PVDF has higher strength and stiffness and has a higher heat deflection temperature than copolymer PVDF. Copolymer PVDF is less stiff but has superior impact resistance and stress crack resistance.
**KEY CHARACTERISTICS:**
- Excellent chemical resistance
- High purity
- Easy to weld using thermoplastic welding equipment
- Good UV stability
- Flame resistant
- Abrasion resistant
- FDA compliant grades available

**APPLICATIONS:**
- Chemical tank liners
- Semiconductor equipment components
- Pump and valve parts

PVDF is also available as a film. See pages 58-59 for more detailed information.
**TYPICAL USES:**

**SURGICAL INSTRUMENT HANDLE**
- Tough
- Autoclavable

**SIZING TRIAL**
- Dimensionally stable
- Autoclavable

Radel R® is a high temperature thermoplastic material with outstanding impact resistance. Radel R® is resistant to hot water and steam and can withstand repeated cycles in a steam autoclave. Radel R® is often used instead of polysulfone or Ultem® for medical applications when superior toughness or extended service life with repeated autoclave cycles is desired.

Impact Resistance

Heat Deflection Temperature

Steam Autoclave Resistance

Radel R® is also available as a film. See pages 58-59 for more detailed information.

KEY CHARACTERISTICS:
- Extremely high impact resistance
- Resistant to hydrolysis when exposed to hot water and steam
- Can withstand repeated sterilization cycles in a steam autoclave
- Thermofoms well
- USP Class VI compliant grades available
- Medical grades available
- Available in a wide variety of colors

APPLICATIONS:
- Medical instrument components
- Sterilization trays
- Implant trials
THERMOSET COMPOSITES

TYPICAL USES:
ELECTRICAL INSULATOR
• Good electrical insulating properties

Thermoset composite materials have the advantage of having extremely high strength and stiffness at relatively low cost when compared with thermoplastics. Each thermoset composite consists of a reinforcement material such as glass fiber or woven cotton that has been impregnated with a plastic resin such as phenolic or epoxy. The resulting composite has unique properties depending on the resin-reinforcement combination selected.

Commercially available grades include
- Paper Phenolic: grades X, XX, and XXX, and punchable grades
- Canvas Phenolic: grades C and CE
- Linen Phenolic: grades L and LE
- Glass Epoxy: grades FR-4, G-10, and G-11
- Glass Melamine: grades G-5 and G-9
- Glass Silicone: grade G-7
- Glass Polyester: grades GPO-1, GPO-2, and GPO-3
**KEY CHARACTERISTICS:**
- Strong and stiff
- Outstanding electrical properties (electrical grades)
- Excellent bearing and wear properties (bearing grade phenolic)
- Good creep resistance
- Dimensionally stable
- High temperature resistant grades available

**APPLICATIONS:**
- Electrical insulators (electrical grades)
- Countertops and other work surfaces
- Bearings, bushings, and gears (bearing grade phenolic)
- Wear pads (bearing grade phenolic)

**TYPICAL USES:**

**TEST SOCKET**
- High dielectric strength
- Good machinability

Ultem® is a semi-transparent high strength plastic material that can operate in high service temperature environments. Ultem® is resistant to hot water and steam and can withstand repeated cycles in a steam autoclave. Ultem® has outstanding electrical properties, with one of the highest dielectric strengths of any thermoplastic material. Ultem® is often used instead of polysulfone when superior strength, stiffness, or temperature resistance is required.

Ultem® is available in glass-filled grades with enhanced strength and stiffness.
KEY CHARACTERISTICS:
- Extremely strong and stiff
- High dielectric strength
- Resistant to hydrolysis when exposed to hot water and steam
- Can withstand repeated sterilization cycles in a steam autoclave
- Good thermoforming properties
- FDA compliant grades available
- USP Class VI compliant grades available
- Medical grades available
- Available in a wide variety of colors

APPLICATIONS:
- Medical instrument components
- Scientific equipment parts
- Manifolds
- Electrical connectors
- Electrical insulation parts
- Semiconductor equipment components

ULTEM® is also available as a film. See pages 58-59 for more detailed information.
**TYPICAL USES:**

**VALVE SEAT**
- Long life
- Wear resistant
- Resists creep and permanent deformation
- Low coefficient of friction
- High temperature performance

**POLYIMIDE SHAPES**

Dupont™ Vespel® Polyimide is an extremely high temperature, creep resistant material that is often used in high heat environments where thermoplastic materials lose their mechanical properties.

Vespel® is available in a variety of formulations including unfilled grades and several low friction and wear grades. Unfilled Vespel® has outstanding sealing properties when it interfaces with metal mating parts. These properties make Vespel® ideal for use in high temperature and high pressure or high vacuum valve seat and gasket applications.

Bearing grade Vespel® will operate successfully without lubrication in many high load, high speed, and/or high temperature environments where thermoplastic bearings and many metal bearing materials may quickly fail.

The new SCP family of DuPont™ Vespel® Polyimide Shapes exhibits enhanced mechanical properties and superior thermal stability.
**KEY CHARACTERISTICS:**
- Long term performance at temperatures up to 260°C (500°F)
- Outstanding sealing characteristics when mated against metals
- Excellent unlubricated wear properties (bearing grades)
- Extremely high limiting PV values (bearing grades)
- Good electrical insulating properties (unfilled grade)

**APPLICATIONS:**
- Semiconductor machinery
- Chip test sockets
- Wafer clamping rings
- Aerospace components
- Spline couplings
- High performance bearings and bushings
- Valve seats
- Gaskets
- Seals
- Piston rings
- Welding nozzle tips

Curbell Plastics is the Western US Region Authorized Supplier of Authentic Vespel® Polyimide Shapes.
VESPEL® SP-1: FOR PHYSICAL AND ELECTRICAL PROPERTIES
SP-1 has high purity and provides physical strength, elongation and toughness, and the best electrical and thermal insulation properties. Semiconductor manufacturers often find components fabricated from Vespel® SP-1 shapes useful in production processes. Applications include: insulators, valve seats, balls, gaskets, poppets, wafer clamping, and in-chamber semiconductor parts.

VESPEL® SP-21: FOR BALANCED LOW WEAR AND PHYSICAL PROPERTIES
SP-21 is ideal for low wear and friction in applications such as bearings, thrust washers, bushings, seal rings, slide blocks, and other wear surfaces. SP-21 has physical strength, elongation, and toughness.

VESPEL® SP-22: FOR LOW WEAR AND DIMENSIONAL STABILITY
SP-22 provides enhanced resistance to wear and friction as well as improved dimensional and oxidative stability. Applications include: bearings, thrust washers, seal rings, ferrules, sleeves, wear strips, and vanes.

VESPEL® SP-211: FOR LOW COEFFICIENT OF FRICTION AND UNLUBRICATED WEAR
SP-211 provides the lowest coefficient of friction over a wide range of operating conditions. It offers excellent wear resistance up to 300°F (149°C). Applications include: sliding and linear bearings, bushings, thrust washers, and seal rings.

VESPEL® SP-3: FOR UNLUBRICATED SEALING AND LOW WEAR IN VACUUM OR DRY ENVIRONMENTS
SP-3 provides lubrication for seals and bearings in vacuum or dry environments. SP-3 provides maximum wear and friction resistance in vacuum and other moisture-free environments, where graphite actually becomes abrasive. Applications include: bushings, bearings, piston rings, seals, and gears.
**VESPEL® SCP-5000:** FOR STRENGTH, HARDNESS, AND CHEMICAL RESISTANCE
OVER A BROAD TEMPERATURE RANGE
SCP-5000 has been developed for demanding applications that require toughness, thermal and dimensional stability, chemical resistance, and stable dielectric performance across a broad temperature range. Applications include: CMP retaining rings, test sockets, substrate lift pins, and aircraft engine parts.

**VESPEL® SCP-5009:** FOR HIGH WEAR AND FRICTION APPLICATIONS UNDER
HIGH OPERATING PRESSURE AND ELEVATED TEMPERATURE ENVIRONMENTS
SCP-5009 shapes have a low coefficient of thermal expansion and provide good sealing as well as outstanding mechanical properties like high compressive strength and low creep, even at these extreme conditions.

**VESPEL® SCP-5050:** FOR HIGH TEMPERATURES, WEAR RESISTANCE,
AND EXCEPTIONAL COEFFICIENT OF THERMAL EXPANSION
SCP-5050 is a new and innovative polyimide composition. SCP-5050 has improved high temperature and wear resistance compared to conventional polyimides allowing replacement of metal and graphite in more applications. It’s proprietary composition is designed to offer a coefficient of thermal expansion (CTE) close to the CTE of metals.

**VESPEL® SCP-50094:** FOR HIGH TEMPERATURE AND WEAR RESISTANCE
SCP-50094 is a proprietary polymer designed for demanding applications that require high strength, high temperature, and wear resistance.
For over 65 years Curbell has been dedicated to providing technical expertise to our customers in a variety of industrial markets. We provide assistance with film material selection for many different environments. From films that offer good chemical resistance to films that have excellent electrical insulation to products that perform well in high temperatures, Curbell can help you select the appropriate film for the job.

Our partnerships with key manufacturers offer our customers access to engineering films such as Polycarbonate, Polyester, Polyimide, PEEK, Ultem®, and PTFE. In addition to providing raw material, Curbell Films also has conversion capabilities. Our services include: die-cutting, sheeting, guillotining, slitting, re-rolling, interleaving, tipping, masking, spooling, and laminating.

Please call for more information on a specific film or thin gauge product.

With over 65 years experience, a highly trained staff of plastic professionals, and a full line of plastic materials, Curbell is dedicated to helping you find the best tape, fabric, and belting solution for your engineering application.

Curbell provides premium PTFE tapes, UHMW tapes, Polyimide tapes, Thermal Spray tapes, PTFE fabrics and belts. All these products are available to you within a one-day shipping lane. We also offer conversion capabilities; such as custom slitting and die-cutting. With nationwide locations we can provide you with technical assistance and quick turnaround on a large inventory of in-stock items. Curbell Specialty Products Group provides material solutions – creating the best customer service in our industry.

Our line of tapes and fabrics includes: very high bond acrylic tapes, PTFE tapes, PTFE fabrics, thermal spray tapes, UHMW tapes, polyimide tapes, and fabric belts. Please call for more information on a specific tape or fabric.
CONVERSION CAPABILITIES

CONVERSION CAPABILITIES:
• Die cutting
• Guillotining
• Inter-leaving
• Laminating
• Masking
• Perforating
• Re-rolling
• Sheeting
• Slitting
• Spooling
• Tipping
1. GET IN THE RIGHT GROUP
WHAT IS MOST IMPORTANT TO THE APPLICATION?

AMORPHOUS THERMOPLASTICS
- Soften over a wide temperature range
- Good formability
- Transparency
- Poor chemical resistance
- Bond well using adhesives or solvents
- Prone to stress cracking
- Poor fatigue resistance
- Structural applications only
  (not suitable for bearing and wear)

SEMICRYSTALLINE THERMOPLASTICS
- Sharp melting point
- Poor formability
- Opaque
- Good chemical resistance
- Difficult to bond using adhesives or solvents
- Resistant to stress cracking
- Good fatigue resistance
- Good for bearing and wear
  (as well as structural applications)

IMIDIZED MATERIALS
- Best physical properties above 400°F
- Best temperature resistance
- Best bearing and wear capabilities
- Good chemical resistance

POTENTIAL MATERIAL CHOICES
- ABS
- Acrylic
- Kynol®
- Noryl®
- PETG
- Polycarbonate
- Polystyrene (HIPS)
- Polysulfone
- PVC
- Radel R®
- Ultem®

6. COMPARE THE PROPERTIES
IS DIELECTRIC STRENGTH (ELECTRICAL INSULATION) IMPORTANT?

AMORPHOUS THERMOPLASTICS
Dielectric strength - insulation (v/mil)
- Ultem® 830
- PVC 544
- Kydex® 514
- Noryl® 500
- Acrylic 430
- Polysulfone 425
- PETG 410
- Polycarbonate 380
- Radel R® 360

SEMICRYSTALLINE THERMOPLASTICS
Dielectric strength - insulation (v/mil)
- Nylon (6 cast) 500-600
- Acetal (Homopolymer) 500
- Acetal (Copolymer) 500
- PTFE 400-500
- PEEK 480
- PPS 450
- PET 400
- PBT 400
- Nylon (6/6 extruded) 300-400
- PVDF (Kynar®) 280

IMIDIZED MATERIALS
Dielectric strength - insulation (v/mil)
- PAI (polyamide-imide) 600
- Vespel® Polyimide SP-1 560

For a more detailed version of the thermoplastic triangle see page 88.
7. THINK ABOUT THE APPLICATION - IS FDA COMPLIANCE IMPORTANT?

AMORPHOUS THERMOPLASTICS
FDA compliant grades available:
• Acrylic
• PETG
• Polycarbonate
• Polystyrene (HIPS)

SEMICRYSTALLINE THERMOPLASTICS
FDA compliant grades available:
• Acetal
• HDPE
• LDPE
• Nylon
• PBT
• PEEK
• PET
• Polypropylene
• PTFE
• PVDF (Kynar®)
• UHMW-PE

SEMICRYSTALLINE THERMOPLASTICS
Good chemical resistance:
• Acetal
• HDPE
• LDPE
• Nylon
• PBT
• PEEK

IMIDIZED MATERIALS
Good chemical resistance:
• PAI (polyamide-imide)
• Vespel® Polyimide Shapes

The virgin, natural, unfilled formulations of the sheet, rod, tube, and film products listed here are available from Curbell Plastics, Inc. in grades that comply with one or more of the FDA’s guidelines for direct food contact at room temperature.

It is important to specify FDA compliant material at the time of the order to ensure that FDA compliant material is provided.

8. THINK ABOUT THE APPLICATION - IS CHEMICAL RESISTANCE IMPORTANT?

SEMICRYSTALLINE THERMOPLASTICS
Good chemical resistance:
• Acetal
• HDPE
• LDPE
• Nylon
• PBT
• PEEK

IMIDIZED MATERIALS
Good chemical resistance:
• PAI (polyamide-imide)
• Vespel® Polyimide Shapes

See pages 80-81 for more specific information
Use this worksheet to help us gather all the information necessary to provide Engineering Plastic options for your application. Please take a moment to answer all the questions pertinent to your application. The answers you list will help us to understand what SPECIFIC characteristics are important to the application.

Please visit www.curbellplastics.com to fill this form out electronically.

APPLICATION WORKSHEET

SELECTION AND DESIGN GUIDELINES

1. What is the primary function of the part? (ie. bearing and wear, structural, or electrical insulator?)

2. What material is currently being used?

3. Are there any problems with the current material?

4. What is the maximum continuous use temperature?

5. Is the temperature exposure intermittent? What is the cycle time?

6. What is the load or stress on the part? Is there a cycle time for the load or stress?

7. For a bearing and wear application, what is the velocity? 
   FPM?                        RPM?
   Is the motion continuous or intermittent?
   If intermittent, what is the cycle time?

8. Is FDA, USDA, NSF, 4A Dairy or any other agency compliance required?

9. What chemicals will be encountered during service?
   What will the exposure time be?
   What is the temperature during exposure?
   What is the concentration level of the chemicals involved?
10. What other environmental factors need to be considered? (ie. UV light, interior/exterior application, radiation, etc.)

11. Is dimensional stability in a wet or humid environment critical?

12. Is toughness or impact resistance critical during use?

13. Is the application an electrical insulator?

14. Are static dissipative characteristics important in the application?

15. Are there minimum flammability requirements for the application?

16. What is the part geometry?

17. Is the color of the part important?

18. What other characteristics are important in the application?
TENSILE STRENGTH
(ABILITY OF THE MATERIAL TO RESIST BEING PULLED APART)

THE MAXIMUM NOMINAL STRESS SUSTAINED BY A TEST SPECIMEN BEING PULLED FROM BOTH ENDS, AT A SPECIFIED TEMPERATURE AND AT A SPECIFIED RATE OF STRETCHING.
FLEXURAL MODULUS
(STIFFNESS)

The ratio, within the elastic limit, of the applied stress in the outermost fibers of a test specimen in three-point, static flexure, to the calculated strain in those outermost fibers.
IMPACT RESISTANCE
(TOUGHNESS)

THE RELATIVE DURABILITY OF PLASTICS ARTICLES TO FRACTURE UNDER STRESSES APPLIED AT HIGH SPEEDS.
COEFFICIENT OF THERMAL EXPANSION
(HOW MUCH A PLASTIC GROWS WITH HEAT)

THE FRACTIONAL CHANGE IN LENGTH OF A MATERIAL FOR A UNIT CHANGE IN TEMPERATURE.
HEAT DEFLECTION TEMPERATURE
(TEMPERATURE AT WHICH A PLASTIC GETS SOFT)

The temperature at which a standard test bar, centrally loaded with a standard load, will deflect a standard amount.
CONTINUOUS SERVICE TEMPERATURE

The approximate temperature above which a plastic material may not be appropriate for service.
DIELECTRIC STRENGTH
(ELECTRICAL INSULATION)

A MEASURE OF THE VOLTAGE REQUIRED TO PUNCTURE AN INSULATING MATERIAL, EXPRESSED IN VOLTS PER MIL (V/MIL) OF THICKNESS.
WATER ABSORPTION
(HOW MUCH WATER GETS SOAKED UP)

THE PERCENTAGE INCREASE IN WEIGHT OF A PLASTIC ARTICLE WHEN IMMERSED IN WATER FOR A SPECIFIED TIME AND AT A SPECIFIED TEMPERATURE

For a more detailed version of the thermoplastic triangle see page 88
APPROXIMATE RELATIVE COST COMPARISON

For a more detailed version of the thermoplastic triangle, see page 88.

$1 = 1$ unit  
$5 = 5$ units
Factors like temperature, concentration of the driving forces, duration and mechanical load are important criteria for the examinations of chemical resistance. In the following table, you can see the materials resistance to different chemicals. These details correspond to the present state of our knowledge and are meant to provide information about our products and their applications. They do not mean that the chemical resistance of products or their suitability for a particular purpose is guaranteed in a legally binding way. Any existing commercial proprietary rights are to be taken into account. We guarantee perfect quality within the scope of our general terms and conditions. For specific applications it is recommended to establish suitability first.

Standard testing is performed in normal climatic conditions 23/50 according to DIN 50 014. All statements, technical information and recommendations contained in this publication are presented in good faith, based upon tests believed to be reliable and practical field experience. The reader is cautioned, however, that Curbell Plastics, Inc. cannot guarantee the accuracy or completeness of this information, and it is the customer’s responsibility to determine the suitability of specific products in any given application.

### CHEMICAL RESISTANCE

![Chemical Resistance Table]

- Resistance also dependent upon concentration, time, and temperature

- Ultem (Polyetherimide)
MACHINING GUIDELINES

DIMENSIONAL STABILITY:
To produce dimensionally accurate parts, it is important to use stress-relieved raw materials. Otherwise, machining operations may result in the release of stresses, which can distort part geometry.

If large volumes of material must be removed, intermediate annealing may be necessary after rough machining to relieve thermal stresses. Annealing times and temperatures for specific materials can be obtained from Curbell Plastics upon request.

Materials with high moisture absorption such as nylon may have to be conditioned before processing. This involves drying the material and then allowing it to reach equilibrium moisture content.

Most plastics have a much higher coefficients of thermal expansion than metals. Close tolerance parts should be manufactured in temperature-controlled environments. Parts intended for use in high temperature or low temperature environments should be designed with tolerances that allow for dimensional changes due to thermal expansion.

MACHINING METHODS:
1. TURNING
Fine, C-2 grade carbide inserts are recommended for turning.
Polished top surfaces will help to reduce material build-up, allowing for better surface finishes.
Cutting edges should have generous relief angles and negative back rake to minimize any rubbing action.
Rough cuts should be run at a feed rate of 0.015 IPR and finish cuts should be run at a feed rate of 0.005 IPR or less.

2. MILLING
HSS tooling works well for most thermoplastics. Carbide tooling is recommended for reinforced materials.
High spindle speeds and table travel are possible with adequate clamping. Care is required when clamping stock to the mill bed to prevent deformation/springing of the material.
Standard roughing end mills work well for roughing cuts. Finish cuts should be made using either 2 flute or 4 flute mills, depending on the material and chip characteristics.
For inside pockets, end mills with rounded corners should be used whenever possible. This will prevent the finished piece from having sharp inside corners, which can potentially be areas of stress concentration.

3. DRILLING
More heat is generated in drilling than in most other machining processes. Heat reduction is critical to minimize machined-in stress.

A 90° to 118° drill point angle with a 9° to 15° lip angle is usually sufficient for most plastic materials. Acrylic drilling requires a 0° rake angle.
The back side of plastic parts should be supported to prevent chipping during drilling. Drilling into unsupported areas should be avoided.
The feed rate should be reduced when the drill gets close to exiting the material.
Deep hole drilling requires “peck drilling” for proper chip clearance and heat dissipation. The drilling depth should not be allowed to exceed 3-4 times the drill diameter before withdrawal.
Drills must be sharp. Incorrectly sharpened or dull drills can induce high levels of stress into the workpiece.
Proper chip ejection is critical. Poor chip ejection will cause frictional heat buildup.
Signs of improper drilling techniques include:
- Cracks
- Crazing
- Melted surfaces

4. SAWING
Thick-walled parts should be sawed with relatively thin blades to avoid excessive frictional heat generation.
Well-sharpened, strongly offset saw blades are recommended.
Specially designed blades are available to optimize cutting for many plastic materials including nylon and acrylic.

5. THREAD CUTTING
Threads are best cut using thread chasers. Burring can be avoided by using twin-toothed chasers.
Die cutters are not recommended as re-cutting can be expected during removal of the cutter.
A machining allowance, dependent on the material and hole diameter, should be taken into account when using tap drills.

6. SAFETY PRECAUTIONS
Failure to use proper machining techniques can result in localized overheating, which can degrade plastic materials. This may result in the release of potentially harmful decomposition products, which should be removed from the air by an appropriate exhaust system. Tobacco products should be kept out of the production area due to the risk of poisoning from the decomposition products of certain plastics.

GENERIC INFORMATION:
Un-reinforced thermoplastics can be machined using high speed steel tools. For glass-reinforced materials, carbide-tipped tools are necessary. In all cases, only correctly sharpened tools should be used.

Due to the low thermal conductivity and low melting temperatures of plastics, good heat removal must be ensured through proper chip removal and cooling with clean dry air or a mild water-based cooling fluid.

All statements, technical information, and recommendations contained in these machining guidelines are presented in good faith, based upon tests believed to be reliable and practical field experience. The reader is cautioned, however, that Curbell Plastics Inc. cannot guarantee the accuracy or completeness of this information, and it is the customer’s sole responsibility to determine the proper machining methods for a given material and part geometry.

*The angle of twist of the drill bit should be approximately 12° to 16°.*
### TURNING

The nose radius $r$ must be at least 0.5 mm.

### MILLING

The feed can be up to 0.55mm/tooth

**SPECIAL MEASURES:**

- [ ] Preheat material to 250°F
- [ ] Caution when using coolants, susceptible to stress cracking
- [ ] Use carbide-tipped tools

**Heat before sawing:**
- From 2.25" - PEEK, PPS
- From 3.25" - PET, PBT
- From 4.00" - Nylon 6

**Heat before drilling:**
- From 60mm diameter - PEEK, PPS
- From 80mm diameter - PET, PBT
- From 100mm diameter - Nylon 6

### PLASTIC MATERIALS

- ABS
- Acetate
- Acetate film and sheet
- Acrylic
- Acrylic impact modified
- Acrylic mirror
- ACRYLITE® acrylic sheet
- Bollard covers
- Calendered vinyl
- Cast acrylic sheet
- Celtec® expanded PVC
- Coextruded colored acrylic
- Conductive engineering plastics
- Coroplast™
- Corner guards
- Delrin®
- Dibond®
- Double patterned acrylic sheet
- DP-32 patterned acrylic sheet
- DuPont™ SentryGlass®
- DuPont™ Vespel® Polyimide Shapes
- Duraplast®
- Engraving stock
- Ergonomic/ Anti-fatigue matting
- Eslon DC glazing
- ETFE
- Expanded PVC
- Fabback® mirror
- FEP
- Fiberglass grating
- Flexible tubing
- Fluoroplastics
- FM4910 materials
- Fome-Cor®
- Gatorfoam®
- GatorPlast®
- Glass-filled engineering plastics
- Giastic® thermosts
- Halar® (ECTFE)
- Heat shrink tubing
- High density polyethylene
- HIPS film
- Hydex® 4101 (PBT)
- InteCel®
- InteClear®
- InteFoam®
- Jetmount®
- Komacel®
- Komadur®
- Komatax®
- KYNEX® thermoplastic sheet
- Kynar® PVDF
- Light diffusing film
- Low density polyethylene
- Makrofol® polyethylene film
- MAKROLOY® HYGARD®
- MAKROLOY® polyethylene sheet
- MAKROLOY® 15 polyethylene sheet
- Marine board
- Medical grade plastics
- Mirror
- Noryl®
- NYCAST® (Nylon)
- NYLON® oil filled
- Nylon
- Nylon MD
- NYMETAL™ (Nylon)
- Opal-Sphere™ mirror
- OPTIX® acrylic sheet
- PBT
- PEEK®
- PEEK® bearing grade
- PET
- PETG film and sheet
- PFA
- Phenolic
- Plastic lumber
- Plastic welding rods
- Platforms
- Plexiglas® acrylic
- Plexus®
- Poly II UVA acrylic sheet
- Polycarbonate film
- Poly 76 acrylic sheet
- Poly 84 acrylic sheet
- Poly bags
- Polymide
- Polymide mirrors
- Polyelectrolyte
- Polyester film
- Polyester
- Polyethylene
- Polyethylene film
- Polyethylene sulfide
- Polyvinylchloride, bearing grade
- Polypropylene
- Polystyrene
- Polysulfone
- PPS
- Press polished vinyl
- Printer polyethylene
- Print grade polystyrene
- PTFE
- PVC
- Radel® R
- Reinforced PTFE
- Reltolite®
- Rigid foams
- Rigid PVC film
- RTV silicone
- Ryton® (PPS)
- Scratch resistant vinyl
- See-thru mirror
- Sign grade materials
- Sign vinyl
- Sintra® expanded PVC
- Soft foams
- Solacryl™ UV transmitting sheet
- Starboard®
- Static cling vinyl
- Static dissipative ABS, Acetal, Polycarbonate, Polyetherimide, and PTFE
- Styrene
- TECAFORM™ (Acetal)
- TECAFORM™ HPV-13 (PTFE filled acetal)
- TECAMID™ 6/6 (Nylon)
- TECANAT™ (Polycarbonate)
- TECAPERK®
- TECAPERK™, bearing grade
- TECAST VEKTON™ (Nylon)
- TECATOR™ (PAI)
- TECATRON™ (PPS)
- TECATRON™ (PPS), bearing grade
- Thermost laminates
- Tuffak® polycarbonate sheet
- Twin wall polycarbonate sheet
- UHMW-PE
- Ultem® (PEI)
- Urethane
- Vinyl
- VINYL HT® PETG
- Welding curtains
- Acetate
- Acrylic
- HDPE
- HIPS
- Kynar® PVDF
- LDPE
- Light diffusing film
- Makrofol®
- polycarbonate film
- Nylon
- PEEK
- PEN
- PETG
- Polycarbonate
- Polyester
- Polyimide

### PLASTIC FILMS

- Acetate
- Acrylic
- HDPE
- HIPS
- Kynar® PVDF
- LDPE
- Light diffusing film
- Makrofol®
- polycarbonate film
- Nylon
- PEEK
- PEN
- PETG
- Polycarbonate
- Polyester
- Polyimide
- Polypropylene
- PVC
- UHMW
- Ultem®
- Vinyl (calendered, press polished, pressure sensitive, scratch resistant, sign, and static cling)

### PROTOTYPING, MOLDMAKING, AND TOOLING MATERIALS

- DSM Somos® SLA resins
- Momentive silicone mold making materials
- PTFM&W liquid casting and laminating urethanes
- PTFM&W liquid casting and laminating epoxies
- Ramp® modeling and tooling board
- RTV silicones

### ADHESIVES AND SEALANTS

- 3M™ adhesives
- 3M™ tapes
- Aerosols
- Anaerobic
- Bostik®
- Cyanoacrylates
- Dispensing equipment-bulk, cartridge
- Epoxy
- Hot melts
- IPS Weld-on®
- Latexes
- Loctite®
- Methacrylates
- Momentive
- RTV silicones
- 3M™

### TAPES, FABRICS, AND BELTS

- 3M™ foam tapes
- 3M™ masking products
- 3M™ MRO tapes
- 3M™ packaging products
- 3M™ transfer tapes
- 3M™ VHB tapes
- Asile marking tapes, Aluminum foil, adhesive backed
- Anti-static UHMW and PTFE coated fiberglass fabric
- Application tape
- ATG transfer tapes
- Carton sealing tape
- Circuit board tapes
- Copper foil, adhesive backed
- Crepe paper masking tapes
- Differential adhesive tapes
- Double-coated tapes (paper, polyester, polypropylene, scrim, and tissue)
- FEP tapes
- Fiberglass cloth tape
- Filament reinforced strapping tapes
- Flame/plasma spray tapes
- Flat back paper tapes
- Fluorescent cloth duct and gaffers tapes
- Friction tape
- Gaffer tapes
- Glow-in-the-dark, polyester tapes
- Heat sealing tapes
- Kaption®
- momentive
- Lead foil, adhesive backed
- Litho graphic arts tape
- Magnetic tapes, one face flexible
- Mechanical grade PTFE coated fiberglass fabric
- Mylar/polyester tapes
- Pipe thread seal (PTFE)
- Pipe wrap tapes, heavy duty SPVC
- Plating tapes, polyester and vinyl
- Polyester splicing tapes
- Polypropylene high clarity label protection/ laminating tapes
- PTFE coated fiberglass cloth
- PTFE fabric belts
- PTFE film tapes
- PVC foam tape
- Reflective tapes
- Safety tapes
- Tear/crease resistant PTFE coated fiberglass fabrics
- Transfer tapes
- UHMW tapes
- Very high bond acrylic tapes
- Vinyl (SPVC) tapes
- Vinyl electrical tapes
- Vinyl electroplating tapes
- Vinyl-cloth duct tapes
- Window glazing tapes
- Very high bond
- Vinyl (SPVC)
Curbell Plastics, Inc. has received ISO 9001:2008 certification through BSI Quality Management Systems. Several Curbell locations and the corporate headquarters have been certified.

ISO 9001:2008 certification assures customers that Curbell Plastics has a fully functioning and well-documented quality management system in place. Conducting business in accordance with this management system ensures traceability for products and services that Curbell Plastics provides.
