

Sometimes it is better to be seen AND heard

Ensinger has developed a new weapon in our line of engineering plastics for the food industry. This revolutionary material has been designed to increase productivity and safety, and is the most versatile material for manufacturing food industry parts yet.

TECAFORM® UD Blue
Acetal Copolymer
Metal Detectable
X-Ray Detectable
Optically Detectable

TECAFORM UD Blue
Stock Shapes

Food Metal Detector

Food X-Ray Detector

Food Optical Detector

- TECAFORM UD Blue is a porosity free acetal copolymer in an FDA compliant blue color. Specially formulated to set off alarms in metal and X-ray detectors, the blue colorant is visible to production line optical scanning equipment as well, and will also set off those alarms when detected. Suitable for food contact.
- Our extensive experience with food industry applications has shown us that there are typically 3 methods of quality control in the plants to keep the food product free from foreign particulates; Optical, metal and x-ray detection. Our industry has developed separate solutions in plastics for each of these scanning scenarios. TECAFORM UD Blue is the first material available that addresses all of these methods in one product.
