Apollo 5100 TECHNICAL DATA SHEET

Apollo 5100 is a single component, high viscosity ethoxyethyl cyanoacrylate adhesive. Low-odor and non-blooming characteristics make this product ideal for use in applications where vapor control is an issue.

Physical Properties - Monomer (Uncured)

Base Compound	Ethoxyethyl
Appearance	Clear
Viscosity	**900 +/- 200 cps cPs**
Specific Gravity	1.06 g/cc
Flash Point	80°C/ 176°F
Shelf Life	12 mo
Storage Condition	20°C/ 68°F
RoHS-Compliant	yes

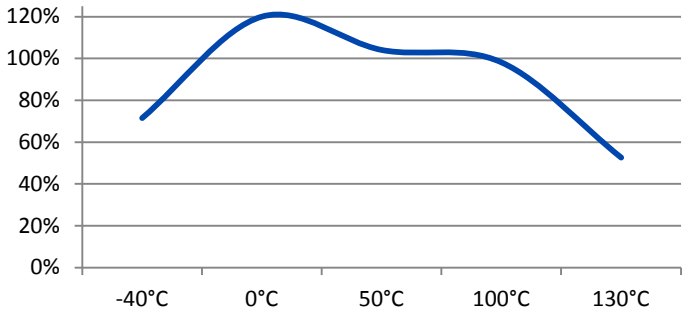
Physical Properties - Polymer (Cured)

Full Cure Time	24 hours
Appearance	Clear
Service Temp Range	-55 to 95 °C (-67 to 203 °F)

Specifications and Approvals

None

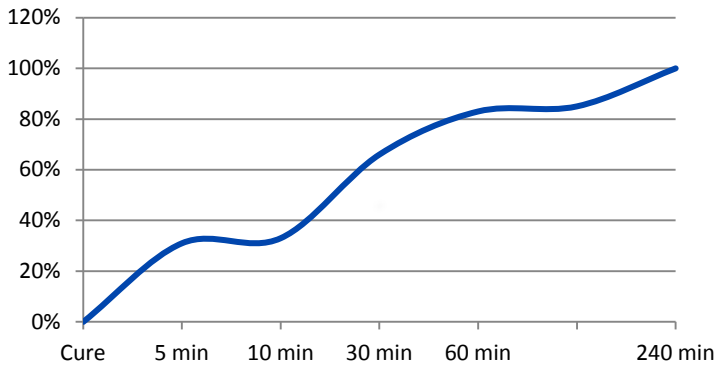
Hot Strength (%RT strength, tested at temperature)



Setting Time

Steel	60	seconds
ABS	20	seconds
EPDM	20	seconds

Time Until Full Cure (% of RT strength)



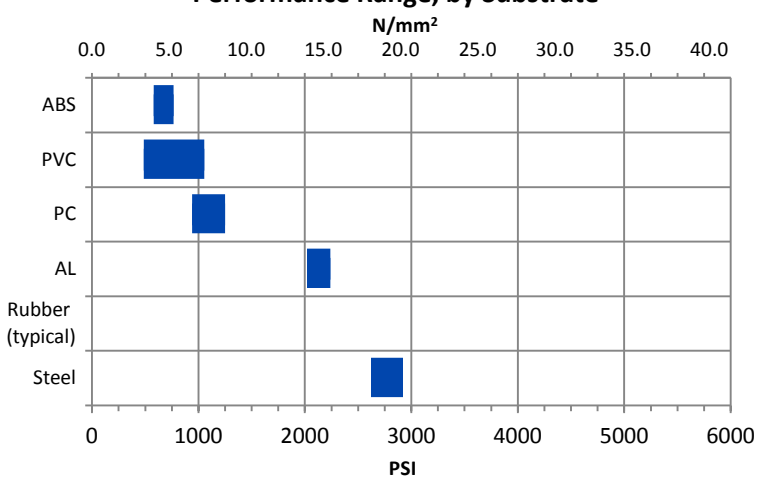
Performance of Cured Adhesive

Substrate	N/mm²			PSI		
Steel	18.1	to	20.1	2620	to	2920
Rubber*	0.0	to	0.0	0	to	0
AL	13.9	to	15.4	2020	to	2240
PC**	6.5	to	8.6	940	to	1250
PVC**	3.3	to	7.3	485	to	1055
ABS**	4.0	to	5.3	580	to	765

***Rubber figures given are typical**. Your results may vary by specific rubber type.

**Tested to ASTM 4501 ***n/r = not recommended

Performance Range, by Substrate



Heat Aging (aged at temp indicated and tested @ 22°C)

Solvent Resistance

Solvent	Example	Resistance
Alcohol	Ethanol, Methanol	+ + +
Ester (aromatic)	Ethylacetate	– – –
Ketone (aromatic)	Acetone, Benzophenone	– – –
Aliphatic hydrocarbon (alkanes)	Petrol, Heptanes, Hexane	+ + –
Aromatic hydrocarbons	Benzyl, Toluol, Xylol	+ + –
Halogenated hydrocarbons	Methylenchloride, Chloroform, Chlorobenzol	– – –
Weak aqueous acid	Nitrite, muriatic acid, sulphuric acid, phosphoric acid	+ + + (– – – if concentrated)
Weak aqueous base	sodium hydroxide solution, caustic potash	+ + + (– – – if concentrated)

General Instructions

Surfaces to be bonded should be clean and dry. Dispense a drop or drops to one surface only. Apply only enough to leave a thin film layer after compression. Press parts together and hold firmly for a few seconds. Good contact is essential. An adequate bond develops in less that one minute and maximum strength is attained in 24 hours. Wipe off excess adhesive from the top of the container and recap. Apollo products if left uncapped may deteriorate by contamination from moisture in the air. Because Apollo products cure by polymerization, whitening may appear on the surface of the container or the bonded materials. This will not affect adhesive performance.

Curing Performance

Ambient surface moisture initiates the curing process. Handling strength is reached in a short time, and will vary based on environmental conditions, bond line gap, and other factors. Product will continue to cure for at least 24 hours before full strength and solvent resistance is developed.

Storage

Products should be stored unopened in a cool, dry place out of direct sunlight. Products should be kept at room temperature away from direct light. Protect from extreme heat or cold, do not refrigerate.
