

## *Some of the main concerns in food plant production are line productivity and food safety*

Ensinger's line of engineering plastics for the food industry have been designed with productivity and safety in mind. All are suitable for food contact.

**TECAFORM® AH FG  
Blue**  
*Acetal Copolymer*

- Porosity free acetal copolymer in FDA compliant blue color. Lighter weight leads to increased line speed. Brilliant blue color easily visible to production line scanning equipment.

**TECAFORM AH UD  
Blue**  
*Ultra Detectable*

- Optical, metal, and x-ray detectable acetal copolymer. Designed to limit particle contamination.

**HYDEX® 4101 UD  
Blue**  
*Ultra Detectable*

- Also optical, metal and x-ray detectable. This PBT polyester is very tough, and resistant to typical food industry cleaning chemicals.

**HYDEX® 4101  
PBT Polyester**

- Excellent resistance to wash down chemicals. Also resistant to staining. Longer lasting parts saves money and resources.
- Better impact resistance than PET polyester.
