

# Plastic Materials for Cutting Boards

## HDPE (High Density Polyethylene) Cutting Boards for Commercial and Industrial Food Applications

### FDA approved material available cut-to-size

HDPE (High-Density Polyethylene) cutting boards are FDA approved for use in food preparation. HDPE is considered food-safe because it does not impart any harmful substances into food and is resistant to moisture absorption, which helps prevent odor and bacterial growth.

Popular in restaurants, convenience stores, large grocers, and food processing plants, HDPE cutting boards offer durability, ease of cleaning, and resistance to moisture and chemicals. They can withstand frequent use and rigorous sanitation critical for any busy environment.

### What makes us different

At Curbell Plastics, we pride ourselves on providing responsive service, delivering innovative solutions, and exceeding expectations — just as we have for more than 85 years. We're here to provide the full line of quality plastic materials, related products, and specialized programs you want — whenever and however you need them.

### TYPICAL APPLICATIONS:

- Commercial cutting boards
- Butcher blocks
- Buffets
- Salad bars
- Food prep stations
- Shelving
- Industrial cutting surfaces
- Food processing equipment

### INDUSTRIES SERVED:

- Convenience stores
- Food processing facilities
- Grocery stores
